

Assignment: Single Vendor E-commerce Website

Project Title

Simple Single Vendor E-commerce Website Using Django

Objective

Develop a simple e-commerce website for a **single vendor/shop** using:

- Django
- HTML
- CSS
- JavaScript
- Bootstrap

The main purpose of this assignment is to practice **Django views, templates, models, URL routing, forms, database operations, and basic frontend design.**

Project Requirements

Students can choose any one type of shop:

- Mobile Shop
 - Book Shop
 - Clothing Shop
 - Computer Shop
 - Grocery Shop
-

1. Home Page

Create a simple homepage containing:

- Shop Name/Logo
- Navigation Bar
- Bootstrap Banner

- Product Categories
 - Featured Products
 - Footer
-

2. Product Page

Display at least **5 products**.

Each product should contain:

- Product Image
- Product Name
- Price
- Short Description
- **View Details** button
- **Add to Cart** button

Products must be loaded from the **Django database**.

3. Product Details Page

When the customer clicks **View Details**, show:

- Product Image
 - Product Name
 - Price
 - Description
 - Available Quantity
 - Add to Cart button
-

4. Shopping Cart

Create a simple shopping cart.

The customer should be able to:

- Add product to cart
- Increase quantity
- Decrease quantity
- Remove product
- See total price

JavaScript can be used for simple quantity/total-price interactions.

5. Checkout Page

Create a simple checkout form:

- Customer Name
- Phone Number
- Address

After clicking **Place Order**, save the order information in the Django database.

Then show:

"Order Placed Successfully!"

Database

Create at least these **3 models**:

Product

Fields:

- Product Name
- Price
- Description
- Image
- Quantity

Customer

Fields:

- Name
- Phone
- Address

Order

Fields:

- Customer

- Product
- Quantity
- Total Price
- Order Date

Students may add additional fields if required.

Django Requirements

Students must use Django for:

- URL Routing
- Views
- Models
- Database
- Templates
- Forms
- Admin Panel

Products should be added and managed through the **Django Admin Panel**.

Frontend Requirements

HTML

Use Django Templates with HTML.

CSS

Use CSS for custom styling.

Bootstrap

Use Bootstrap for:

- Navbar
- Cards
- Buttons
- Forms
- Grid system
- Alerts

JavaScript

Use JavaScript for at least one feature, such as:

- Quantity increase/decrease
 - Total price calculation
 - Form validation
 - Product search
-

Required Pages

Students must create these pages:

1. **Home**
 2. **Products**
 3. **Product Details**
 4. **Cart**
 5. **Checkout**
 6. **Order Success**
-

Minimum Features

The following features are mandatory:

- Display products from database
 - View product details
 - Add product to cart
 - Update cart quantity
 - Remove product from cart
 - Calculate total price
 - Checkout form
 - Save order to database
 - Django Admin product management
 - Responsive Bootstrap design
-

Bonus Features

Students can add extra features for bonus marks:

- Product Search
 - Category Filter
 - Login/Register
 - Product Discount
 - Product Rating
 - Order History
-

Submission Requirements

Students must submit the complete project through **GitHub**.

1. Create a GitHub Repository

Create a **public GitHub repository** for your project.

Repository name example:

`single-vendor-ecommerce`

2. Upload the Complete Project

The GitHub repository must contain:

- Complete Django project
- HTML templates
- CSS files
- JavaScript files
- Bootstrap implementation
- Django models
- Views
- URLs
- Database migration files
- `requirements.txt`
- `README.md`

2. Final Submission

Students must submit their **GitHub Repository URL** to the instructor.

Example:

`https://github.com/username/single-vendor-ecommerce`

Important

- Repository must be **Public**.
- Do not upload unnecessary files such as `.venv`, `__pycache__`, or other temporary files.
- The submitted GitHub repository must contain the **complete working project**.

Final Task

Develop a simple Single Vendor E-commerce Website using Django, HTML, CSS, JavaScript, Bootstrap, and SQLite.

The customer should be able to:

View Products → View Details → Add to Cart → Manage Cart → Checkout → Place Order

The project should be **simple, functional, responsive, and user-friendly**.
